2. CITATIONS AND EXPLANATIONS

Claims 1-9 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest determining which of the seat parameters are most significant to meeting the desired objective by running simulations on the detailed model, optimizing the most significant parameters to best meet the desired objective, and modifying the prototype seat assembly according to the results of optimizing the most significant parameters.

Claims 10-16 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest determining which of the seat parameters are most significant to meeting the desired objective by running simulations on the detailed model, optimizing the most significant parameters to best improve rear impact performance, and modifying the prototype seat assembly according to the results of optimizing the most significant parameters.

Each of the references previously cited as an "X" reference in the International Search Report has been removed, because upon review, neither reference teaches or fairly suggests the combination of method steps claimed by Applicant and reproduced above.

Claims 1-16 meet the criteria set out in PCT Article 33(4), and thus demonstrate industrial applicability because the subject matter claimed can be made or used in industry.
